

Archäologisches Kolloquium

Digitale Vortragsveranstaltung des Instituts für Ur- und Frühgeschichte

Montag, 18. Oktober // 18.30 – 20.30 Uhr

Das Institut für Ur- und Frühgeschichte, Kiel, lädt im Rahmen des Archäologischen Kolloquiums im Wintersemester 2021/22 zu folgendem Hybrid-Vortrag mit anschließender Diskussion **ein:**

Dr. Ester Oras und Dr. Mari Tõrv, Tartu,
sprechen zum Thema:

Archemy – advancing multiproxy dietary analysis in the Baltics

Ancient dietary analysis has become an intrinsic part of archaeological research. Different laboratory methods ranging from zooarchaeology and archaeobotany to stable isotopes and organic residue analysis have been applied to better understand ancient lifeways. Despite being fruitful on their own the key to a more reliable and multifaceted characterisation of past dietary practices is in multiproxy analysis. A new archaeological science laboratory – Archemy – combining different subfields of ancient dietary analysis was established at the University of Tartu, Estonia in 2020. Being the first of its kind in the eastern Baltic, the aim of this new research facility is to advance archaeological sciences, particularly biomolecular archaeology, and take a leading role in employing novel analytical methodologies to better understand ancient food- and lifeways in the Baltics. The presentation will introduce the work of the Archemy group providing an overview of our research competences complemented by several dietary-related case studies.

This project of the Baltic-German University Liaison Office is supported by the German Academic Exchange Service (DAAD) with funds from the Foreign Office of the Federal Republic Germany.
