### Sessions

Space, the final frontier – Transformation of social space in forager societies • Transformation as human response to climate and environmental change? • Starting where they stopped to rest: Transformation of Stone Age burial practices between the Baltic and the Urals. • A diversity of barrows? – Early earthen grave mounds between the Caucasus and the Atlantic seaboard. • From tells to settlement systems: Neolithic and Bronze Age landscapes, populations and networks along the Danube and Tisza • Complexity in archaeology – Diachronic transformations of complex networks and theoretical aspects of complex systems • Mediterranean connections – how the sea links people and transforms identities of emergence? • Territoriality in Europe in the Bronze and Iron Age • Urban knowledge: Mental concepts of premodern cities • Layers of landscape: Anthropological and ethnoarchaeological perspectives • Social resilience to climate changes with perspectives on the past 5000 years • Archaeohydrology – natural water supply and cultural water demand in the past • Human, beast and landscape. A diachronic study of hunting and human-animal relationship in Northern Europe and the Baltic Sea area • Osteobiography of suffering and disease: interdisciplinary approaches to gain insights into past health conditions • The implications of the study of the past for the anthropology of health • Trends, phases, events – temporal scales in archaeological and palaeoenvironmental data • Determinism in archaeology: What is it and why does it matter? • Transformations in geophysical and geoarchaeological methods Scales of Transformation in Prehistoric and Archaic Societies
